# Section 1: Executive Summary

## Process and Methods

This community health needs assessment brings together a variety of demographic and health data and information, gathered from both primary and secondary data sources.

The first phase of the community health needs assessment involved collection and analysis of numerous demographic and health status and data and information for USC Arcadia Hospital Service Area and Service Planning Area (SPA) 3 – San Gabriel Valley. The following types of data were analyzed: population, household and family demographics; birth statistics, death statistics, designated Health Professional Shortage Areas, large-scale household telephone surveys designed to measure health access, utilization of health services, and health behaviors. Wherever possible, the SPA 3 or Los Angeles County health experience was benchmarked to Healthy People 2020 objectives. In addition, to assist with providing context to the demographics, USC Arcadia Hospital Service Area is compared to Los Angeles County.

The second phase of the needs assessment focused on qualitative primary research. Representatives from USC Arcadia Hospital agreed that telephone interviews with public health department contacts and representatives from public and private organizations would be a cost-effective approach to gain an understanding of important health issues and potential opportunities to collaborate with these organizations. USC Arcadia Hospital also participated with other member hospitals in the San Gabriel Valley Health Consortium to develop a workplan related to gathering input from community stakeholders. In addition, the project consultant reviewed the findings from the community input for three participating hospitals in the collaborative to identify key themes.<sup>1</sup> These themes included: access to care (primary care, prevention services and screenings), chronic diseases, mental health, substance abuse, housing and homelessness, and COVID-19.

## Service Area Determination

Note: Determination of service area updated based on 2022 inpatient origin analysis

USC Arcadia Hospital used the Stark II definition – the lowest number of contiguous ZIP Codes from which the hospital draws at least 75 percent of its inpatients – to determine its geographic service area for purposes of the 2022 community health needs assessment. Using hospital data, there were 22 ZIP Codes from which the hospital drew 75 percent its admissions.

---

<sup>1</sup> 2022 Community Health Needs Assessments posted online were reviewed for Huntington Hospital, Kaiser Foundation Hospital – Baldwin Park, and Pomona Valley Hospital Medical Center.

# Service Area Definition and Description

Note: Findings are based on 2022 demographic estimates

Note: USC Arcadia Hospital is located in Arcadia ZIP Code 91007

The service area population (2022) is estimated at 763,737 persons. The population in the service area is forecast to increase 0.4 percent in the next five years, to 766,589 persons. Growth projections for households and families are estimated to increase 0.6 percent and 0.5 percent. The following table summarizes the service area population, households, and families as well as the percent change projected for 2027 (over a five-year period).

**Summary of Population, Households and Families**

USC Arcadia Hospital Service Area  
2022 and 2027

Description	Number		Percent Change From 2022 to 2027
	2022	2027	
<b>Demographics</b>			
Population	763,737	766,589	0.4%
Households	234,410	235,714	0.6%
Families	177,261	178,137	0.5%

Source: Claritas

To assist with providing context to the service area demographics, key statistics are compared to Los Angeles County for 2022 in the following table. Of note, in comparison to Los Angeles County, USC Arcadia Hospital service area has a **higher** proportion of:

- Persons age 55 years and older
- Persons of Asian race
- Persons speaking an Asian or Pacific Island language at home
- Households with 3 or more persons
- Households with children under 18 years of age
- Owner-occupied households
- Families at or above the poverty level

### Summary of Demographic Highlights

USC Arcadia Hospital Service Area Compared to Los Angeles County

2022

Indicator	Percent	
	Service Area	LA County
<b>5-Year Change (2022 to 2027)</b>		
Population	0.4%	0.8%
Households	0.6%	0.8%

## Health Access and Utilization

Note: Findings are based on the 2021 California Health Interview Survey for SPA 3

When comparing health access and utilization indicators in SPA 3 to Healthy People 2020 objectives, SPA 3 did not meet the objectives related to: medical insurance for persons under age 65 (insured all of part of the year), usual source of ongoing care, delays in getting medical care, and delays in getting prescription medications.

### Summary of Health Access and Utilization Indicators

SPA 3 Compared to Healthy People 2020 Objectives  
2021

Indicator	Healthy People 2020 Objective	SPA 3 San Gabriel Valley
<b>Health Access</b>		
Insured All or Part of Year Age 0 to 64 Years	100%	93%
Usual Source of Ongoing Care All Ages	95%	87%
Delays in Getting Medical Care All Ages	4.2%	16.0%
Delays in Getting Medications All Ages	2.8%	9.2%

# COVID-19

Note: Findings are based on the 2021 California Health Interview Survey for SPA 3

The SPA experience compared to Los Angeles County and California rates is summarized in the following table. Results appear comparable in the three geographies.

## Adult Diagnosis, Testing and Vaccine Responses

SPA 3 Compared to Los Angeles County and California

2021

Indicator	SPA 3 Rate	County Rate	California Rate
<b>COVID Diagnosis, Testing and Vaccine Acceptance</b>			
Ever Had or Thought Had COVID-19	22%	20%	21%
Tested Positive for COVID-19	21%	20%	17%
Already Received at Least 1 dose vaccine	57%	55%	57%

Source: UCLA Center for Health Policy Research

## Childcare, Employment and Financial Impacts - Adults

SPA 3 Compared to Los Angeles County and California

2021

Indicator	SPA 3 Rate	County Rate	California Rate
<b>Childcare Impacts</b>			
Experienced Childcare Difficulties	4%	3%	3%
<b>Financial Impacts</b>			
Lost Job Due to COVID-19	15%	16%	13%
Had Reduced Hours or Income	24%	28%	24%
Worked From Home	27%	31%	30%
Difficulty Paying for Basic Necessities	14%	16%	12%
Difficulty Paying Rent/Mortgage	11%	13%	10%

Source: UCLA Center for Health Policy Research

# Mortality

Note: Findings are based on deaths among residents of the service area in 2020 and three-year averages of deaths that occurred among residents of Los Angeles County during 2018 through 2020

In 2020, there were 6,674 deaths in USC Arcadia Hospital service area. Heart disease and cancer were the top two leading causes of death in the service area, accounting for 40 percent of all deaths. Of note, coronary heart disease is the leading cause of death in USC Arcadia Hospital Service Area and the leading cause of premature death in Service Planning Area 3 (2017). Other leading causes of death in the service area are summarized in the table below.

### Profile of Deaths, Ranked By Select Leading Causes of Death

USC Arcadia Hospital Service Area

2020

Select Leading Cause of Death	Number	Percent
Heart Disease	1,383	20.7%
Cancer (All Types)	1,273	19.1%
Stroke	361	5.4%
Alzheimer's disease	353	5.3%
Diabetes	263	3.9%
Chronic Lower Respiratory Disease	229	3.4%
Unintentional Injuries (All Types)	168	2.5%
Influenza and Pneumonia	163	2.4%
Essential Hypertension & Hypertensive Renal Disease	60	0.9%
Chronic Liver Disease and Cirrhosis	53	0.8%
Nephritis, Nephrotic Syndrome and Nephrosis	15	0.2%
Suicide	-	0.0%
All Other	2,353	35.3%
<b>All Causes of Death</b>	<b>6,674</b>	<b>100.0%</b>

Source: California Department of Public Health

When comparing age-adjusted death rates in Los Angeles County to Healthy People 2020 objectives, the County did not meet the objectives related to: homicide and chronic liver disease and cirrhosis deaths. The County experience compared to Healthy People 2020 national objectives is summarized in the table below.

**Summary of Age-Adjusted Death Rates by Cause of Death**

Los Angeles County Compared to Healthy People 2020 Objectives

Three-Year Average (2018 to 2020)

Indicator	Healthy People 2020 Objective	Los Angeles County
<b>Health Status</b>		
Coronary Heart Disease	103.4	96.6
Stroke	34.8	32.9
Cancer (All Sites)	161.4	124.4
Lung	45.5	20.6
Colorectal	14.5	12.3
Prostate	21.8	18.6
Female Breast	20.7	18.3
Unintentional Injuries (All Types)	36.4	29.5
Motor Vehicle Accidents	12.4	8.3
Homicide	5.5	6.0
Suicide	10.2	8.2
Chronic Liver Disease and Cirrhosis	8.2	12.8

*Note: Rates are per 100,000 persons and are standardized to the 2000 U.S. Standard Million population*

*Source: California Department of Public Health*

# Maternal and Infant Health

Note: Findings are based on live births that occurred in the service area during 2018 to 2020, three-year averages of pregnancy and birth outcomes that occurred among residents of Los Angeles County during 2018 to 2020, and three-year averages of infant mortality among infants during 2017 to 2019

On average, there were 7,913 live births a year in USC Arcadia Hospital’s service area during the three-year period from 2018 through 2020.

### Number of Live Births

USC Arcadia Hospital Service Area  
*Three-Year Average (2018 to 2020)*

Year	Number of Births
2018	8,309
2019	8,394
2020	7,036
<b>Three-Year Average</b>	<b>7,913</b>

Source: California Department of Public Health

When comparing maternal and infant health indicators in Los Angeles County to Healthy People 2020 objectives, Los Angeles County met the objectives.

### Summary of Maternal and Infant Health Indicators

Los Angeles County Compared to Healthy People 2020 Objectives  
*Three-Year Averages (2018 to 2020) and (2017 to 2019)*

	Healthy People 2020 Objective	Los Angeles County
<b>Health Access and Pregnancy Outcome (2018 to 2020)</b>		
Early Prenatal Care	84.8%	87.0%
Low Birth Weight Infants	7.8%	7.4%
<b>Infant Mortality (2017 to 2019)</b>		
Infant Mortality	6.0	3.6

Source: California Department of Public Health

## Child Health

Note: Findings are based on 2021 California Health Interview Survey for SPA 3

When comparing child and adolescent health to Healthy People 2020 objectives, SPA 3 did not meet the health access objective related to usual source of ongoing care. Note: Other measures of child health were statistically unreliable.

### Summary of Child and Adolescent Health Indicators

SPA 3 Compared to Healthy People 2020 Objectives

2021

Indicator	Healthy People 2020 Objective	SPA 3 San Gabriel Valley
<b>Health Access</b>		
Usual Source of Ongoing Care	100%	86%

Source: UCLA Center for Health Policy Research

# Adult Health

Note: Findings are based on 2021 California Health Interview Survey for SPA 3

When comparing adult health indicators in SPA 3 to Healthy People 2020 objectives, though SPA 3 did not meet the health access objectives related to medical insurance (insured all or part of the year) and usual source of ongoing care, SPA 3 did meet the objectives for all stated targets regarding health behaviors.

**Summary of Adult Health Indicators**  
SPA 3 Compared to Healthy People 2020 Objectives  
2021

Indicator	Healthy People 2020 Objective	SPA 3 San Gabriel Valley
<b>Health Access</b>		
Insured All or Part of Year	100%	92%
Usual Source of Ongoing Care	89.4%	84.9%
<b>Health Behaviors</b>		
Healthy Weight	33.9%	33.6%*
Obese	30.5%	33.0%*
Diagnosed with High Blood Pressure	26.9%	23.1%
Currently Smoke Cigarettes	12.0%	6.0%
Engaged in Binge Drinking	24.3%	16.9%

*\*Note: Healthy weight and obese rates in SPA 3 are within the 95% confidence intervals*

*Source: UCLA Center for Health Policy Research*

# Senior Health

Note: Findings are based on 2020 California Health Interview Survey for SPA 3

When comparing senior health indicators in SPA 3 to Healthy People 2020 objectives, SPA 3 did not meet the objectives related to: diagnosed with high blood pressure.

### Summary of Senior Health Indicators

SPA 3 Compared to Healthy People 2020 Objectives  
2021

Indicator	Healthy People 2020 Objective	SPA 3 San Gabriel Valley
<b>Health Behaviors</b>		
Healthy Weight	33.9%	45.5%
Obese	30.5%	27.6%
Diagnosed with High Blood Pressure	26.9%	50.0%

Source: UCLA Center for Health Policy Research

## **Community Consultation**

Note: Findings are based on surveys with representatives of community and public organizations in the San Gabriel Valley conducted in December 2022. See Section 11: Community Consultation for additional information.

The following were identified as the community's top health issues (based on frequency of overall mention):

- Access to health services
- Availability of mental health services
- Screening, care, and management of individual health

## **Process and Criteria Used**

In preparing the community health needs assessment, USC Arcadia Hospital combined quantitative data about service area demographics, availability of health insurance, health access to and utilization of key services, health status, and health behaviors with qualitative data, including opinions of community leaders regarding important health issues in the community.

The following criteria were used to identify and prioritize significant health needs in the community:

- Healthy People 2020 targets not met
- Foci of Healthy People 2030
- Number of persons affected
- Identification and/or validation as an important health issue in the community consultations
- Identified by community organizations as an opportunity to work collaboratively to address health issue

## **Significant Priority Health Needs Identified**

- Access to health services
- Availability of mental health services
- Screening, care, and management of individual health

## **Health Care Facilities and Other Resources**

The following health care facilities and other resources are located in the ZIP codes of USC Arcadia Hospital's service area:

- 16 open hospitals (ten general acute care hospitals and two acute psychiatric hospitals)
- 32 licensed free and community clinics
- 15 senior/community centers

## Section 2: Process and Methods

This section includes:

---

- Description of secondary data and information
- Description of analytical methods applied
- Identification of information gaps
- Summary of process for community consultation
- Identification of third-party contractor

## **Demographics and Health Data and Information**

This community health needs assessment brings together a variety of demographic and health information, gathered from both primary and secondary data sources.

The first phase of the community health needs assessment involved collection and analysis of numerous demographic and health status and data and information for USC Arcadia Hospital Service Area and Service Planning Area (SPA) 3 – San Gabriel Valley. The following types of data were analyzed: population, household and family demographics; birth statistics, death statistics, designated Health Professional Shortage Areas, large-scale household telephone surveys designed to measure health access, utilization of health services, and health behaviors. Wherever possible, the SPA 3 or Los Angeles County health experience was benchmarked to Healthy People 2020 objectives. In addition, to assist with providing context to the demographics, USC Arcadia Hospital Service Area is compared to Los Angeles County.

The second phase of the needs assessment focused on qualitative primary research. Representatives from USC Arcadia Hospital agreed that telephone interviews with public health department contacts and representatives from public and private community organizations would be a cost effective approach to gain an understanding of important health issues and potential opportunities to collaborate with these organizations.

### **Sources of the Data**

The following sources of data and information were used in this community health needs assessment:

- California Department of Education
- California Department of Public Health
- Center for Social Sciences Research at University of California at Berkeley
- Department of Health Care Access and Information (HCAI)
- Los Angeles County Department of Public Health
- Los Angeles Homeless Services Authority
- Los Angeles County 211.com and City websites located in the USC Arcadia Hospital service area
- Claritas
- UCLA Center for Health Policy Research – AskCHIS (California Health Interview Survey) online query system
- United States Department of Health and Human Services (HHS)

## Dates of the Data

All data and information reviewed in the community health needs assessment used the most recent available. The table below summarizes the dates of the data used.

**Dates of the Data Used in the Community Health Needs Assessment**

Description	Date of Data
Demographics	2022
Homeless Persons	2022
Primary Care Shortage Areas	2021
Health Access and Utilization	2021
Deaths	2020
Death Rates	2018 – 2020
Years of Potential Life Lost Before Age 75	2017
Births	2018 – 2020

Child Abuse and Neglect	2021
Health Care Facilities and Resources	2022

## Analytical Methods Applied

In many instances, health status information is based on multiple years of data and was used to establish three-year averages for the service area. Widely accepted demographics and health measurements – such as persons with average household size and income, health insurance coverage, healthy weight and obesity, age-adjusted death rates, low birth weight infants, and pregnant women with early entry into prenatal care – were used in this community health needs assessment. To assist with prioritization of health issues, secondary data and information is benchmarked to Healthy People 2020 national objectives.<sup>1</sup> In addition, comparisons to local, regional, and state figures are applied. Finally, the report introduces Healthy People 2030, a new nationwide agenda for health and well-being addressing health conditions, health behaviors, population groups, settings and systems, and social determinants of health – including health care access and quality.

---

<sup>1</sup> Prepared by the U.S. Department of Health and Human Services, Healthy People 2020 outlines a nationwide agenda focused on promoting health and preventing illness, disability, and premature death. Healthy People 2020 builds on initiatives pursued over the past three decades.

## **Information Gaps**

Information gaps were most apparent in the following areas:

- Availability of local data on COVID-19 cases, hospitalizations, and deaths (e.g., by ZIP Code, age, gender)
- Availability of extensive local data related to social determinants of health, as defined in Healthy People 2030 (e.g., economic stability, education access and quality, health care access and quality, neighborhood and built environment and social and community context)
- Availability of local (ZIP Code) data on maternal births (e.g., age group of mother, race/ethnicity of mother), birth outcomes (e.g., early prenatal care and infant birth weights), and infant outcomes (e.g., infant mortality)
- Availability of local (ZIP Code) data on mortality (e.g., number of deaths by age group for leading causes of death such as coronary heart disease, stroke and cancer)
- Limitations on some statistically reliable health data by age groups (such as children, adults, and seniors) in the service area
- Statistically reliable health data by race/ethnicity in the service area
- Updated data on Years of Potential Life Lost Before Age 75

## **Community Consultation**

### **Process**

USC Arcadia Hospital leadership and staff identified 20 contacts for telephone interviews. Individuals selected for interviews represented Los Angeles County Department of Public Health, cities/departments in the hospital services area, non-profit community-based health and social organizations serving populations such as the poor, seniors, and Chinese residents; physicians with clinical practices in the community, and a business owner. The project consultant recommended that the hospital use the same open-ended questions as applied in prior community health needs assessments, so as to obtain respondents opinions of important health issues, without favoring prompted questions related to COVID-19. Once individuals confirmed interest in participation, a letter – describing the purpose of the phone survey and the questions to be posed in the upcoming telephone interview – was distributed electronically (via email) to all contacts.

## **Third-Party Contractor**

USC Arcadia Hospital retained Debbie N. Alpers (previously DNA and Company, Inc.) to prepare this Community Health Needs Assessment. USC Arcadia Hospital has worked with Ms. Alpers since 1998 to conduct a triennial community needs assessment, in compliance with California Senate Bill 697, community benefits legislation. Following the enactment of Senate Bill 697 in 1994, Ms. Alpers was endorsed by the Healthcare Association of Southern California (HASC) to assist its member hospitals in the design and completion of service area specific community needs assessments. In the ten cycles of needs assessments that began in 1995, Ms. Alpers has completed over 75 hospital needs assessments, in addition to assessments conducted for health care organizations and clinics.

## Section 3: Service Area Definition and Demographics

This section includes:

---

- Description of how the service area was determined
- Definition of USC Arcadia Hospital Service Area
- Demographics of USC Arcadia Hospital Service Area, including population, household and family characteristics
- Description of the homeless population in SPA 3
- Demographics of USC Arcadia Hospital Service Area compared to Los Angeles County

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix A: Service Area Description
- Appendix B: Age Group Detail

## Determination of Service Area for Purposes of the Needs Assessment

USC Arcadia Hospital used the Stark II definition – the lowest number of contiguous ZIP Codes from which the hospital draws at least 75 percent of its inpatients – to define its geographic service area for purposes of the 2022 community health needs assessment. Using this definition, there are 22 ZIP Codes that defined 75 percent its admissions in 2022.

## Definition of Service Area for Purposes of the Needs Assessment

For purposes of the 2022 Community Needs Assessment, USC Arcadia Hospital defined its service area to include the following ZIP codes/communities.

### Service Area Definition

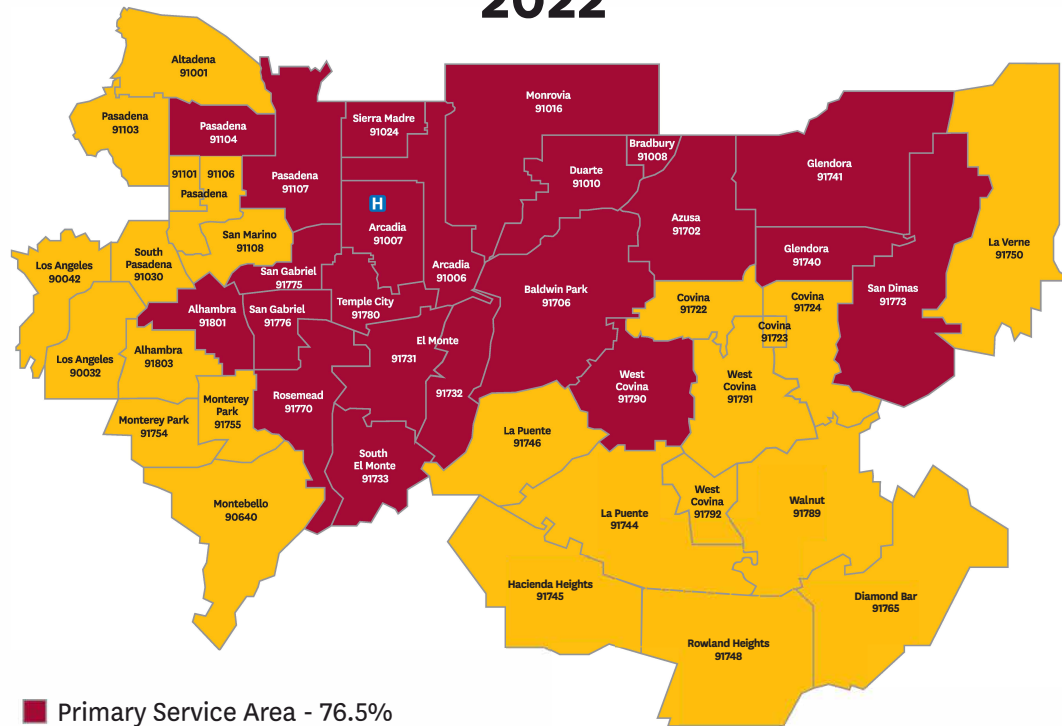

USC Arcadia Hospital Service Area  
2022

ZIP Code	Community
91006 - 91007	Arcadia
91008	Bradbury
91010	Duarte
91016	Monrovia
91024	Sierra Madre
91104	Pasadena
91107	Pasadena
91702	Azusa
91706	Baldwin Park
91731 - 91732	El Monte
91733	South El Monte
91740 - 91741	Glendora
91770	Rosemead
91773	San Dimas
91775 - 91776	San Gabriel
91780	Temple City
91790	West Covina
91801	Alhambra

# Population

**What's Being Measured** The service area population for estimated 2022 and projected 2024.

**How the Measure is Defined** The number of persons living in the service area. The change in number of persons is calculated by subtracting the estimated 2022 population from the projected 2024 population. The change in percent is calculated the dividing the change in number of persons by the 2022 population.

## **Race/Ethnicity**

**What's Being Measured** Race/ethnicity for the population.

**How the Measure is Defined** There are no universally accepted definitions for race and Hispanic ethnicity. The Census currently defines “Hispanic or Latino” as an ethnicity, not a race. In the race question for Census 2010, the option of marking one or more race categories was given. People who marked only one race are referred to as the race alone population. Those who marked more than one race are referred to as the two or more races population. All respondents who marked more than one race are collapsed into this category. The question on Hispanic origin asked respondents if they are Spanish, Hispanic or Latino.

The following eight race/ethnicity groupings are used: (1) White is non-Hispanic White and includes persons having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicate their race as “White” or report entries such as Irish, German, Italian, Lebanese, Near Easterner, Arab or Polish. (2) Black is non-Hispanic Black and includes persons having origins in any of the Black racial groups of Africa. It includes people who indicate their race as “Black or African American” or provide written entries such as African American, Kenyan, Nigerian or Haitian. (3) American Indian and Alaskan Native is non-Hispanic American Indian and Alaskan Native and includes persons having origins in any of the original peoples of North and South America (including Central America) and who maintain tribal affiliation or community attachment. (4) Asian is non-Hispanic Asian and includes persons having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Vietnam, Malaysia, Pakistan, the Philippine Islands, and Thailand. It includes people who provide written entries such as Asian Indian, Chinese, Filipino, Korean, Japanese, Vietnamese, and other Asian. (5) Native Hawaiian/Pacific Islander is non-Hispanic Native Hawaiian/Pacific Islander and includes persons having origins in Hawaii, Guam, Samoa, or other Pacific Islands. (6) Hispanic is Hispanic or Latino and includes the total of all those who identified themselves as Hispanic or Latino. (7) Some Other Race is non-Hispanic some other race and includes all other responses not included in the categories above. (8) Two or More Races is non-Hispanic two or more races.

The sum of these eight race/Hispanic ethnicity categories is the 2022 total population.

# Employment Status for Persons 16 Years and Older

**What's Being Measured** Employment status for persons age 16 years and older.

**How the Measure is Defined** Employment status is grouped into the following four categories: (1) persons in the labor force and employed, (2) persons in the labor force and unemployed (e.g., not at work and were looking for work and available to accept a job), (3) persons in the armed forces serving active duty with the United States Army, Air Force, Navy, Marine Corps or Coast Guard, and (4) persons who are not classified as members of the labor force (consists mainly of students, housewives, retired workers, seasonal workers enumerated in an off season who were not looking for work, institutionalized persons, and persons doing only incidental unpaid family work). The sum of these four groupings for employment status is the 2022 population age 16 years and older.

## Service Area Experience

# Occupation Type for Employed Labor Force

**What's Being Measured** Occupation classification of employed labor force.

**How the Measure is Defined** Occupations are grouped into the following three types: (1) white collar (includes occupations of management/business/financial operations, professional and related occupations, sales and office), (2) blue collar (includes occupations of construction and transportation/material moving), and (3) service and farming. The sum of these three categories is 2022 employed labor force.

# Households

**What's Being Measured** Households in the service area for estimated 2022 and projected 2024.

**How the Measure is Defined** A household is considered a housing unit, occupied by either a single person or two or more related or unrelated persons. Units occupied by ten or more unrelated individuals are called group quarters, not households. The change in number of households is calculated by subtracting the estimated 2022 households from the projected 2024 households. The change in percent is calculated the dividing the change in number of households by the 2022 households.

## **Service Area Experience**

## Group Quarters Population by Type

**What's Being Measured** The population living in group quarters.

**How the Measure is Defined** Group quarters is a type of residence inhabited by ten or more persons, unrelated to the householder and includes the following seven types: (1) college/university student housing, (2) military quarters, (3) other non-institutional facilities, (4) correctional facilities for adults, (5) juvenile facilities, (6) nursing home, and (7) other institutional facilities. The sum of these seven group quarters types is the 2022 population living in group quarters.

# Persons Per Household and Average Household Size

**What's Being Measured** Persons per household and average household size.

**How the Measure is Defined** The number of households is reported for the following seven household size categories: 1-person, 2-persons, 3-persons, 4-persons, 5-persons, 6-persons, and 7 or more persons. The sum of these seven categories household size is the 2022 total households. Average household size is calculated by dividing the total population living in households by the total number of households.

# Households by Presence of Children Under 18 Years of Age

**What's Being Measured** Households are described by the presence of one or more persons under 18 years of age (children) living in the household.

**How the Measure is Defined** Households with children living in the household may include married couple families, families with male householders (no wives), families with female householders (no husbands), and non-family households. The sum of these two household descriptions is the 2022 total households.

## Service Area Experience

## Households by Income Group and Average Household Income

**What's Being Measured** Households in various income groupings.

**How the Measure is Defined** Household income includes the total money received in the stated calendar year by all household members 15 years and older. The income is presented in terms of current dollars for 2022. The number of households with an annual household income is reported for the following 12 income groups: (1) under \$15,000; (2) \$15,000 to \$24,999; (3) \$25,000 to \$34,999; (4) \$35,000 to \$49,999; (5) \$50,000 to \$74,999; (6) \$75,000 to \$99,999; (7) \$100,000 to \$124,999; (8) \$125,000 to \$149,999; (9) \$150,000 to \$199,999; (10) \$200,000 to \$249,999; (11) \$250,000 to \$499,999; and (12) \$500,000 and over. The sum of households with these 12 income groupings is the 2022 total households. Average household income is calculated the dividing the total income of an area by the number of households in the area.

## Households by Age of Head of Household

**What's Being Measured** The number of households by age group of the head of household.

**How the Measure is Defined** The head of households is reported for the following eight age groups: (1) 15 to 24 years, (2) 25 to 34 years, (3) 35 to 44 years, (4) 45 to 54 years, (5) 55 to 64 years, (6) 65 to 74 years, (7) 75 to 84 years, and (8) 85 years and older. The sum of the households headed by persons in these age groups is the 2022 total households.

# Owner-Occupied and Renter-Occupied Housing Units

**What's Being Measured** Owner-occupied housing units and renter-occupied housing units for estimated 2022.

**How the Measure is Defined** A housing unit is owner-occupied if the owner or co-owner lives in the unit. All occupied housing units that are not owner-occupied, whether they are rented for cash rent or occupied without payment of cash rent, are classified as renter-occupied (units may be provided free of rent by friends or relatives in exchange for services, such as resident manager, caretaker, or tenant farmer). Housing units on military bases are also classified in the “no cash rent” category. The sum of owner-occupied housing units and renter-occupied housing units is the 2022 total occupied housing units.

## Service Area Experience

# Families

**What's Being Measured** The number of families (family households) for estimated 2022 and projected 2024.

**How the Measure is Defined** A family household consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage or adoption. All persons who are related to the householder are regarded as members of his or her family. The change in number of families is calculated by subtracting the estimated 2022 families from the projected 2024 families. The change in percent is calculated the dividing the change in number of families by the 2022 families.

## Families by Poverty Status

**What's Being Measured** Families below the poverty level and at or above the poverty level.

**How the Measure is Defined** the Census Bureau uses the federal government's official poverty definition. Families are reported as either (1) below the federal poverty level or (2) at/above the federal poverty level. The sum of these two groupings is the 2022 families.

# Homeless Population

**What's Being Measured** Count of homeless population.

**How the Measure is Defined** To accurately enumerate the homeless population in Los Angeles County, a point-in-time census was conducted on February 22, 23 and 24, 2022, with the support of volunteers, partners and community service providers. In this study, the U.S. Department of Housing and Urban Development's definition of homelessness was used. The definition is an individual who lacks a fixed, regular and adequate nighttime residence and an individual who has a primary nighttime residence that is a supervised publicly or privately operated shelter designed to provide temporary living accommodations or an institution that provides a temporary residence for individuals intended to be institutionalized or a public or private place not designated for, or ordinarily used as, a regular sleeping accommodation for human beings.

According to Los Angeles Homeless Service Authority (LAHSA), rising homelessness is a statewide challenge, with the affordable housing crisis driving a regional increase in homelessness.

## Section 4: Health Access and Utilization

This section includes:

---

- Identification of Health Professional Shortages Areas for primary care
- Findings from the 2021 California Health Interview Survey for SPA 3 benchmarked to Healthy People 2020 targets
- Health access indicators for SPA 3 compared to Los Angeles County and California

Key used to summarize SPA 3 experiences benchmarked to Healthy People 2020 Targets:

---

Target Met

Target Not Met

Listing of Health Care Facilities located in USC Arcadia Hospital Service Area can be found in:

---

- Section 13: Health Care Facilities and Other Resources

# Health Professional Shortage Areas

**What's Being Measured** The federal Health Professional Shortage Area (HPSA) identifies areas having a shortage of primary care health care providers.

**How the Measure is Defined** Primary care HPSA is decided on the basis of availability of primary care physicians. Criteria is based on practitioner-to-population ratios and the presence of barriers to access such as travel distance. These designations are established by Medical Service Study Areas (MSSA), geographical areas based upon U.S. Census tracts; MSSAs are redefined every decade following the U.S. Census.

## Service Area Experience

### Primary Care Health Professional Shortage Areas

Medical Service Study Areas in USC Arcadia Hospital Service Area  
2021

Medical Service Study Area (MSSA)	Primary Care Health Professional Shortage Area
Arcadia Central and Northeast/Bradbury/Monrovia/Sierra Madre (78.2xxx)	
Arcadia Southeast/San Gabriel North (78.2ddd)	
Altadena East/Azusa North/Duarte North/Glendora/Pasadena East (78.2gggg)	
El Monte (78.2oo)	▲
Rosemead/San Gabriel South/South El Monte West/Temple City West (78.2qqq)	
Baldwin Park/Irwindale (78.2zzz)	

Note:

▲ Indicates that Medical Service Study Area is a designated shortage area for primary care

Source: Department of Health Care Access and Information

# Medical Insurance

**What's Being Measured** Persons under age 65 years with medical insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health insurance includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** About 1 in 10 people in the United States don't have health insurance. People without health insurance are less likely to have a primary care provider and they may not be able to afford the health care services and medications they need. Strategies to increase insurance coverage rates are critical for making sure more people get important health care services, like preventive care and treatment for chronic illnesses.

**Healthy People 2020 Objective** Increase the proportion of persons under age 65 years with medical insurance to 100%.

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

93% of persons age 0 to 64 years had medical insurance

**Source of Data** UCLA Center for Health Policy Research

## Source of Ongoing Care

**What's Being Measured** Persons of all ages with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons of all ages who have a specific source of ongoing care to 95.0%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

87% with a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Delays in Getting Medical Care

**What's Being Measured** Persons of all ages who reported delays in getting needed medical care.

**How the Measure is Defined** Respondents were asked if they experienced any delays or did not get needed medical care (doctor, specialist or other health professional). Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Delaying medical care can negatively impact health and increase the cost of care. People who can't get care when they need may have more preventable complications, hospitalizations, emotional stress, and higher costs. Strategies to increase insurance coverage rates and improve health information technology may help reduce delays in care.

**Healthy People 2020 Objective** Reduce the proportion of persons who are unable to obtain or delay in obtaining necessary medical care to 4.2%

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

16.0% experienced delays in getting needed medical care

## Main Reasons Reported for Delays in Getting Medical Care in SPA 3

- Healthcare system/provider issues and barriers (32.4%)
- COVID-19 (25.2%)
- Cost, lack of insurance, or other insurance related reasons (23.8%)
- Personal and other reasons (18.6%)

**Source of Data** UCLA Center for Health Policy Research

# Delays in Getting Prescription Medications

**What's Being Measured** The proportion of persons who reported delays or didn't get prescription medicines.

**How the Measure is Defined** Respondents were asked if they experienced any delays or did not get needed medicines that a doctor prescribed. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Prescription medicines are critical for managing many common diseases and disorders. When people can't get the medicines they need, treatable conditions may get worse. Evidence shows that the most effective approaches for reducing delays and difficulty in getting prescription medicines involve addressing financial barriers and increasing insurance coverage.

**Healthy People 2020 Objective** Reduce the proportion of all persons of who are unable to obtain or delay in obtaining necessary prescription medicines to 2.8%

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

9.2% experienced delays in getting prescription medications

**Source of Data** UCLA Center for Health Policy Research

## Summary of Health Access and Utilization Indicators and Comparison to Healthy People 2020 Targets

Note: Findings are based on 2021 California Health Interview Survey for SPA 3

When comparing health access and utilization indicators in the SPA to Healthy People 2020 objectives, the SPA did not meet the objectives related to: medical insurance (insured all of part of the year), usual source of ongoing care, delays in getting medical care and delays in getting medications. The SPA experience compared to Healthy People 2020 objectives as well as Los Angeles County and California rates is summarized in the following table.

### Summary of Health Access Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2020 Targets  
2021

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Access (2021)</b>					
Insured All or Part of Year Age 0 to 64 Years	93%	-	93%	93%	100%
Usual Source of Ongoing Care All Ages	87%	-	84%	86%	95%
Delays in Getting Medical Care All Ages	16.0%	-	18.4%	17.6%	4.2%
Delays in Getting Medications All Ages	9.2%	-	8.2%	8.1%	2.8%

Note:

Target rate is Healthy People 2020 objective

Source: UCLA Center for Health Policy Research

## **Section 5: COVID-19**

This section includes:

---

- Findings from the 2021 California Health Interview Survey for SPA 3
- COVID-19 indicators for SPA 3 compared to Los Angeles County and California

## **Diagnosis, Testing and Vaccine Acceptance**

**What's Being Measured** The proportion of adults who ever had COVID-19, the proportion of adults who were tested for COVID-19, and the proportion of adults who already received at least one dose of COVID-19 vaccine.

**How the Measure is Defined** Adults were asked the following question: "Have you ever had, or thought you might have had, the Coronavirus, COVID-19?" Adults who were tested for COVID-19 were asked: "Did you ever receive a positive test result for COVID-19?" Finally, adults were asked "If a vaccine becomes available for COVID-19, would you get it?" Results are from the 2021 California Health Interview Survey.

**Healthy People 2020 Objectives** None Established

### **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

22% of adults ever had or thought had COVID-19

21% of adults tested for COVID-19 tested positive

57% of adults already received at least one dose of vaccine for COVID-19

**Source of Data** UCLA Center for Health Policy Research

## **Childcare Impacts**

**What's Being Measured** The proportion of adults who reported experiencing childcare difficulties due to COVID-19.

**How the Measure is Defined** Adults were asked about personal impacts from the COVID-19 pandemic related to childcare difficulties. Results are from the 2021 California Health Interview Survey.

**Healthy People 2020 Objectives** None Established

### **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

4% of adults experienced childcare difficulties due to COVID-19 (result is statistically unstable)

**Source of Data** UCLA Center for Health Policy Research

## **Financial Impacts**

**What's Being Measured** The financial impacts of COVID-19, including the proportion of working adults who lost their regular job, had reduced hours or income, and worked from home. In addition, the proportion of adults who experienced difficulty paying for basic necessities and difficulty paying the rent or mortgage.

**How the Measure is Defined** Adults in the workforce were asked the following questions: “Have you experienced any of the following situations because of the Coronavirus or COVID-19 outbreak – I’ve lost my regular job; I’ve had a reduction in hours or a reduction in income; and I’ve switched to working from home. Adults were asked whether they had difficulty paying for basic necessities and whether they experienced difficulty paying rent/mortgage. Results are from the 2021 California Health Interview Survey.

**Healthy People 2020 Objectives** None Established

### **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

15% of adults in the workforce lost their regular job due to COVID-19

24% of adults in the workforce had reduced hours or income due to COVID-19

27% of adults in the workforce switched to working from home due to COVID-19

14% of adults experienced difficulty paying for basic necessities

11% of adults experienced difficulty paying rent/mortgage

**Source of Data** UCLA Center for Health Policy Research

## Summary of COVID-19 Indicators and Comparison to Los Angeles County and California

Note: Findings are based on 2021 California Health Interview Survey for SPA 3

The SPA experience compared to Los Angeles County and California rates is summarized in the following table. Results appear comparable in the three geographies.

### Adult Diagnosis, Testing and Vaccine Responses

SPA 3 Compared to Los Angeles County and California

2021

Indicator	SPA 3 Rate	County Rate	California Rate
<b>COVID Diagnosis, Testing and Vaccine Acceptance</b>			
Ever Had or Thought Had COVID-19	22%	20%	21%
Tested Positive for COVID-19	21%	20%	17%
Already Received at Least 1 dose vaccine	57%	55%	57%

Source: UCLA Center for Health Policy Research

### Childcare, Employment and Financial Impacts - Adults

SPA 3 Compared to Los Angeles County and California

2021

Indicator	SPA 3 Rate	County Rate	California Rate
<b>Childcare Impacts</b>			
Experienced Childcare Difficulties	4%	3%	3%
<b>Financial Impacts</b>			
Lost Job Due to COVID-19	15%	16%	13%
Had Reduced Hours or Income	24%	28%	24%
Worked From Home	27%	31%	30%
Difficulty Paying for Basic Necessities	14%	16%	12%
Difficulty Paying Rent/Mortgage	11%	13%	10%

Source: UCLA Center for Health Policy Research

## Section 6: Mortality

This section includes:

---

- Summary of premature mortality in Los Angeles County and SPA 3
- Profile of deaths in USC Arcadia Hospital Service Area
- Age-adjusted death rates in Los Angeles County benchmarked to Healthy People 2020 targets
- Age-adjusted death rates in Los Angeles County compared to California

Key used to summarize Los Angeles County experiences benchmarked to Healthy People 2020 targets:

	Target Met
	Target Not Met
	No Target Established

## Premature Mortality in Los Angeles County

Years of potential life lost before age 75 years (YPLL-75) is one of the commonly used public health measures to reflect the impact of premature mortality. In 2017, the top three leading causes of premature death in Los Angeles County were coronary heart disease, drug overdose (unintentional), and suicide. The ranking, and years of potential life lost before age 75 (YPLL-75) due to selected leading causes of death in Los Angeles County are summarized in the table on the next page.

### Years of Potential Life Lost for Leading Causes of Premature Death, Ranked

Los Angeles County  
2017

Rank	Cause of Death	YPLL-75
1	Coronary Heart Disease	51,515
2	Drug overdose (Unintentional)	27,743
3	Suicide	26,016
4	Motor vehicle crash	25,915
5	Homicide	24,769
6	Liver disease/cirrhosis	21,604
7	Diabetes mellitus	19,102
8	Stroke	16,085
9	Lung Cancer	13,427
10	Breast cancer	12,224

Source: Los Angeles County Department of Public Health

## Premature Mortality in Service Planning Area 3

In 2017, the top three leading causes of premature death in SPA 3 – San Gabriel Valley were coronary heart disease, suicide, and motor vehicle crashes. The ranking and years of potential life lost before age 75 (YPLL) due to selected leading causes of death are summarized in the table below.

### Top Five Leading Causes of Premature Death, Ranked by YPLL

Service Planning Area 3 (San Gabriel Valley)

2017

Rank	Cause of Death	YPLL-75
1	Coronary Heart Disease	8,166
2	Suicide	4,426
3	Motor vehicle crash	4,395
4	Liver disease/cirrhosis	3,758
5	Diabetes mellitus	3,457
6	Drug overdose (Unintentional)	3,318
7	Homicide	3,226
8	Lung Cancer	2,776
9	Colorectal Cancer	2,299
10	Stroke	2,250

Source: Los Angeles County Department of Public Health

## Profile of Deaths in USC Arcadia Hospital Service Area

In 2020, there were 6,674 deaths in USC Arcadia Hospital service area. Heart disease and cancer were the top two leading causes of death in the service area, accounting for 40 percent of all deaths. Of note, coronary heart disease is the leading cause of death in USC Arcadia Hospital Service Area and the leading cause of premature death in Service Planning Area 3 (2017). Other leading causes of death in the service area are summarized in the table below.

### Profile of Deaths, Ranked By Select Leading Causes of Death

USC Arcadia Hospital Service Area

2020

Select Leading Cause of Death	Number	Percent
Heart Disease	1,383	20.7%
Cancer (All Types)	1,273	19.1%
Stroke	361	5.4%
Alzheimer's disease	353	5.3%
Diabetes	263	3.9%
Chronic Lower Respiratory Disease	229	3.4%
Unintentional Injuries (All Types)	168	2.5%
Influenza and Pneumonia	163	2.4%
Essential Hypertension & Hypertensive Renal Disease	60	0.9%
Chronic Liver Disease and Cirrhosis	53	0.8%
Nephritis, Nephrotic Syndrome and Nephrosis	15	0.2%
Suicide	-	0.0%
All Other	2,353	35.3%
<b>All Causes of Death</b>	<b>6,674</b>	<b>100.0%</b>

Source: California Department of Public Health

# Coronary Heart Disease

**What's Being Measured** The age-adjusted death rate due to coronary heart disease.

**How the Measure is Defined** Coronary heart disease is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes I11 and I20-I25. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Heart disease is the leading cause of death in the United States. Coronary heart disease is the most common type of heart disease. Although the death rate from coronary heart disease has gone down in recent years, disparities by sex, race/ethnicity, and geographic location remain. Strategies to lower the risk of developing coronary heart disease, like controlling blood pressure, can help reduce deaths.

**Healthy People 2020 Objective** Reduce coronary heart disease deaths to 103.4 deaths per 100,000 population.

**USC Arcadia Hospital Service Area Experience (2020)** 1<sup>st</sup> cause of death

**Service Planning Area 3 – San Gabriel Valley Experience (2017)** 1<sup>st</sup> cause of premature death

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

96.6 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Stroke

**What's Being Measured** The age-adjusted death rate due to stroke.

**How the Measure is Defined** Stroke is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes I60-I69. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Stroke is the fifth leading cause of death in the United States and a leading cause of long-term disability. Low-income populations, some racial/ethnic groups, and people who live in certain geographic regions are more likely to have a stroke and to die of a stroke. Interventions to lower people's risk for stroke by improving blood pressure, diet, and physical activity are critical for reducing stroke deaths. Raising awareness of stroke signs and symptoms and improving stroke management can also help reduce death and disability related to stroke.

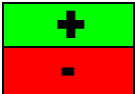

**Healthy People 2020 Objective** Reduce stroke deaths to 34.8 deaths per 100,000 population.

**USC Arcadia Hospital Service Area Experience (2020)** 3<sup>rd</sup> cause of death

**Service Planning Area 3 – San Gabriel Valley Experience (2017)** 10<sup>th</sup> cause of premature death

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

 32.9 deaths per 100,000 population

**Source of Data** California Department of Public Health

## **Cancer (All Sites)**

**What's Being Measured** The age-adjusted death rate due to cancer (all sites).

**How the Measure is Defined** Cancer (all sites) is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C00-C97. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Cancer is the second leading cause of death in the United States. Strategies to help people quit smoking, eat healthy, and get more physical activity can help reduce deaths from different types of cancer. Vaccines, screening procedures, and new treatments can also help reduce cancer deaths.

**Healthy People 2020 Objective** Reduce cancer deaths to 161.4 deaths per 100,000 population.

**USC Arcadia Hospital Service Area Experience (2020)** 2<sup>nd</sup> cause of death

### **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

124.4 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Lung Cancer

**What's Being Measured** The age-adjusted death rate due to lung cancer.

**How the Measure is Defined** Lung cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C33-C34. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Lung cancer is one of the most common and deadly cancers in the United States. Although lung cancer death rates have decreased in recent years, there are significant disparities by sex and race/ethnicity. Evidence shows that screening and interventions to prevent tobacco initiation and help people quit smoking can help lower the number of lung cancer deaths.

**Healthy People 2020 Objective** Reduce lung cancer deaths to 45.5 deaths per 100,000 population.

**Service Planning Area 3 – San Gabriel Valley Experience (2017)** 8<sup>th</sup> cause of premature death

## Los Angeles County Experience

**Measurement Period** 2018 – 2020

20.6 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Colorectal Cancer

**What's Being Measured** The age-adjusted death rate due to colorectal cancer.

**How the Measure is Defined** Colorectal cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C18-C21. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Colorectal cancer is one of the most common causes of cancer deaths in the United States. There are effective screening tools for finding colorectal cancer early, when people may be more likely to survive it. Strategies to increase use of recommended screenings and to help people get physical activity and eat healthy are key to reducing the colorectal cancer death rate.

**Healthy People 2020 Objective** Reduce colorectal cancer deaths to 14.5 deaths per 100,000 population.

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

12.3 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Prostate Cancer

**What's Being Measured** The age-adjusted death rate due to prostate cancer.

**How the Measure is Defined** Prostate cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) code C61. The rate is per 100,000 males and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Prostate cancer is the most commonly diagnosed cancer and the second leading cause of cancer deaths in American men. Death rates from prostate cancer are much higher in some groups than others. Research shows that closely monitoring prostate cancer is an effective way to reduce the prostate cancer death rate in men who are diagnosed early.

**Healthy People 2020 Objective** Reduce prostate cancer deaths to 21.8 deaths per 100,000 males.

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

18.6 per 100,000 males

**Source of Data** California Department of Public Health

# Female Breast Cancer

**What's Being Measured** The age-adjusted death rate due to breast cancer in females.

**How the Measure is Defined** Breast cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) code C50. The rate is per 100,000 females and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Breast cancer is one of the most common types of cancer in American women. Although breast cancer death rates have gone down in recent years, they remain higher in some racial/ethnic groups. Interventions to increase breast cancer screening, personalized treatments, and community based cancer control efforts are important for reducing breast cancer deaths.

**Healthy People 2020 Objective** Reduce breast cancer deaths to 20.7 deaths per 100,000 females.

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

18.3 deaths per 100,000 females

**Source of Data** California Department of Public Health

# Chronic Obstructive Pulmonary Diseases

**What's Being Measured** The age-adjusted death rate due to chronic obstructive pulmonary diseases. Chronic obstructive pulmonary diseases are a group of diseases that cause airflow blockage and breathing-related problems and include emphysema and chronic bronchitis.

**How the Measure is Defined** Chronic obstructive pulmonary diseases are defined as International Classification of Diseases, Tenth Revision (ICD-10) codes J40-J44, and excludes asthma. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** COPD (chronic obstructive pulmonary disease) is a group of disease – including emphysema, chronic bronchitis, and non-reversible asthma – that make it hard to breath and can cause death. COPD is a major cause of disability and one of the leading causes of death in the United States – and people who have COPD may not know it. Strategies to reduce deaths from COPD include reducing smoking and exposure to air pollution, teaching people with COPD how to manage it, and promoting tests that find it earlier.

**Healthy People 2020 Objective** Reduce chronic obstructive pulmonary disease deaths to 102.6 deaths per 100,000 population age 45 years and older.

**USC Arcadia Hospital Service Area Experience (2020)** 6<sup>th</sup> cause of death

## Los Angeles County Experience

**Measurement Period** 2018 – 2020

25.4 deaths per 100,000 population (all ages)

**Source of Data** California Department of Public Health

# Influenza/Pneumonia

**What's Being Measured** The age-adjusted death rate due to influenza/pneumonia.

**How the Measure is Defined** Influenza/Pneumonia is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes J09-J18. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Older adults are more likely to get pneumonia and to be hospitalized for it. Pneumonia is also a leading cause of death for older adults. Making sure older adults get pneumococcal vaccines and encouraging people to get smoking can help reduce hospital admissions for and deaths due to pneumonia.

**Healthy People 2020 Objective** None established.

**USC Arcadia Hospital Service Area Experience (2020)** 8<sup>th</sup> cause of death

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

 17.4 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Diabetes-Related

**What's Being Measured** The age-adjusted death rate due to diabetes (as both an underlying cause of death and a contributing cause of death).

**How the Measure is Defined** Diabetes is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes E10-E14, as either an underlying or contributing cause of death. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce the diabetes-related death rate to 65.8 per 100,000 population (includes those with diabetes listed as either an underlying or a contributing cause of death).

**USC Arcadia Hospital Service Area Experience (2020)** 5<sup>th</sup> cause of death

**Service Planning Area 3 – San Gabriel Valley Experience (2017)** 5<sup>th</sup> cause of premature death

## Los Angeles County Experience

**Measurement Period** 2018 – 2020

26.1 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Unintentional Injuries (All Types)

**What's Being Measured** The age-adjusted death rate due to all unintentional injuries.

**How the Measure is Defined** Unintentional injuries is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes V01-X59 and Y85-Y86. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Unintentional injuries from things like falls, drug overdoses, and motor vehicle crashes are a major cause of death in the United States. There are many effective strategies to reduce unintentional injuries, including interventions tailored to groups at high risk for certain types of injuries.

**Healthy People 2020 Objective** Reduce unintentional injury deaths to 36.4 deaths per 100,000 population.

**USC Arcadia Hospital Service Area Experience (2020)** 7<sup>th</sup> cause of death

## Los Angeles County Experience

**Measurement Period** 2018 – 2020

29.5 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Motor Vehicle Crashes (Traffic-Related)

**What's Being Measured** The age-adjusted death rate due to motor vehicle crashes (traffic related).

**How the Measure is Defined** Motor vehicle crashes is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes V02-V04 (.1, .9), V09.2, V12-V14 (.3-.9), V19 (.4-6), V20-V28 (.3-.9), V29-V79 (.4-.9), V80 (.3-.5), V81.1, V82.1, V83-V86 (.0-.3), V87 (.0-.8), and V89.2. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Motor vehicle crashes are the second leading cause of death from unintentional injuries in the United States. In addition, the rate of motor vehicle crash deaths in the United States is about twice the average rate of other high income countries. Interventions aimed at increasing seat belt and car seat use, reducing drunk driving and speed-related crashes, and protecting pedestrians can reduce deaths from motor vehicle crashes.

**Healthy People 2020 Objective** Reduce deaths due to motor vehicle crashes to 12.4 deaths per 100,000 population.

**Service Planning Area 3 – San Gabriel Valley Experience (2017)** 3<sup>rd</sup> cause of premature death

### Los Angeles County Experience

**Measurement Period** 2018 – 2020

8.3 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Homicide

**What's Being Measured** The age-adjusted death rate due to homicide.

**How the Measure is Defined** Homicide is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes U01-U02, X85-Y09 and Y87.1. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Homicide is a major cause of death in the United States, and there are major disparities by age and race/ethnicity. Strategies to prevent intimate partner violence, child abuse and neglect, and youth violence are critical for reducing homicides.

**Healthy People 2020 Objective** Reduce homicide deaths to 5.5 deaths per 100,000 population.

**Service Planning Area 3 – San Gabriel Valley Experience (2017)** 7<sup>th</sup> cause of premature death

## Los Angeles County Experience

**Measurement Period** 2018 – 2020

6.0 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Alzheimer's Disease

**What's Being Measured** The age-adjusted death rate due to Alzheimer's disease.

**How the Measure is Defined** Alzheimer's disease is defined as International Classification of Diseases, Tenth Revision (ICD-10) code G30. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** None established.

**USC Arcadia Hospital Service Area Experience (2020)** 4<sup>th</sup> leading cause of death

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

37.9 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Suicide

**What's Being Measured** The age-adjusted death rate due to suicide.

**How the Measure is Defined** Suicide is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes U03, X60-X84 and Y87.0. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Suicide is one of the leading causes of death nationwide, particularly among young people. In addition, suicide rates have increased in almost every state over the last two decades. Interventions to address behaviors that increase that risk of suicide, like drug and alcohol misuse, may help reduce the suicide ration nationwide.

**Healthy People 2020 Objective** Reduce suicide deaths to 10.2 deaths per 100,000 population.

**Service Planning Area 3 – San Gabriel Valley Experience (2017)** 2<sup>nd</sup> cause of premature death

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

8.2 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Chronic Liver Disease and Cirrhosis

**What's Being Measured** The age-adjusted death rate due to cirrhosis.

**How the Measure is Defined** Cirrhosis is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes K70, K73, and K74. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Why the Measurement is Helpful** Chronic liver disease and cirrhosis are among the leading causes of death in the United States. Most cirrhosis deaths are related to alcohol use, and there are significant race/ethnic disparities in rates of cirrhosis deaths. Effective policies to reduce cirrhosis deaths include taxing and regulating alcohol sales and restricting alcohol advertising.

**Healthy People 2020 Objective** Reduce cirrhosis deaths to 8.2 deaths per 100,000 population.

**USC Arcadia Hospital Service Area Experience (2020)** 10<sup>th</sup> cause of death

**Service Planning Area 3 – San Gabriel Valley Experience (2017)** 4<sup>th</sup> cause of premature death

## **Los Angeles County Experience**

**Measurement Period** 2018 – 2020

12.8 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Summary of Mortality and Comparison to Healthy People 2020 Targets

Note: Findings are based on the top five causes of premature death in SPA 3 in 2017, a profile of deaths among residents of the service area in 2020, and three-year averages of deaths that occurred among residents of Los Angeles County during 2018 through 2020

In 2017, the top three leading causes of premature death in SPA 3 – San Gabriel Valley were coronary heart disease, suicide, and motor vehicle crashes. The ranking and years of potential life lost before age 75 (YPLL) due to selected leading causes of death are summarized in the table below.

### Top Five Leading Causes of Premature Death, Ranked by YPLL

Service Planning Area 3 (San Gabriel Valley)

2017

Rank	Cause of Death	YPLL-75
1	Coronary Heart Disease	8,166
2	Suicide	4,426
3	Motor vehicle crash	4,395
4	Liver disease/cirrhosis	3,758
5	Diabetes mellitus	3,457
6	Drug overdose (Unintentional)	3,318
7	Homicide	3,226
8	Lung Cancer	2,776
9	Colorectal Cancer	2,299
10	Stroke	2,250

Source: Los Angeles County Department of Public Health

In 2020, there were 6,674 deaths in the service area. Heart disease and cancer were the top two leading causes of death in the service area, accounting for 40 percent of all deaths. Of note, coronary heart disease is the leading cause of death in USC Arcadia Hospital Service Area (2020) and the leading cause of premature death in Service Planning Area 3 (2017). Other leading causes of death in the service area are summarized in the following table.

### Profile of Deaths, Ranked by Select Leading Causes of Death

USC Arcadia Hospital Service Area

2020

Select Leading Cause of Death	Number	Percent
Heart Disease	1,383	20.7%
Cancer (All Types)	1,273	19.1%
Stroke	361	5.4%
Alzheimer's disease	353	5.3%
Diabetes	263	3.9%
Chronic Lower Respiratory Disease	229	3.4%
Unintentional Injuries (All Types)	168	2.5%
Influenza and Pneumonia	163	2.4%
Essential Hypertension & Hypertensive Renal Disease	60	0.9%
Chronic Liver Disease and Cirrhosis	53	0.8%
Nephritis, Nephrotic Syndrome and Nephrosis	15	0.2%
Suicide	-	0.0%
All Other	2,353	35.3%
<b>All Causes of Death</b>	<b>6,674</b>	<b>100.0%</b>

Source: California Department of Public Health

When comparing age-adjusted death rates in Los Angeles County to Healthy People 2020 objectives, the County did not meet the objectives related to: homicide and chronic liver disease and cirrhosis deaths. The County experience compared to Healthy People 2020 national objectives is summarized in the table below.

### Summary of Age-Adjusted Death Rates by Cause of Death

Los Angeles County compared to California and Healthy People 2020 Targets

Three-Year Average (2018 to 2020)

Indicator	Los Angeles County		California Rate	Target Rate
	Rate	Status		
<b>Health Status</b>				
Coronary Heart Disease	96.6	+	80.2	103.4
Stroke	32.9	+	36.7	34.8
Cancer (All Sites)	124.4	+	128.3	161.4
Lung	20.6	+	22.9	45.5
Colorectal	12.3	+	11.9	14.5

Indicator	Los Angeles County		California Rate	Target Rate
	Rate	Status		
Prostate	18.6	+	19.1	21.8
Female Breast	18.3	+	18.2	20.7
Chronic Pulmonary Diseases	25.4	○	28.5	None
Influenza/Pneumonia	17.4	○	13.5	None
Diabetes	26.1	○	22.3	N/A
Unintentional Injuries (All Types)	29.5	+	37.9	36.4
Motor Vehicle Accidents	8.3	+	10.0	12.4
Homicide	6.0	-	5.2	5.5
Alzheimer's disease	37.9	○	37.7	None
Suicide	8.2	+	10.5	10.2
Chronic Liver Disease and Cirrhosis	12.8	-	12.6	8.2

Notes:

Target rate is Healthy People 2020 objective

Rates are per 100,000 persons and are standardized to the 2000 U.S. Standard Million population

Healthy People 2020 Chronic pulmonary disease death rate is for the population age 45 years and older; data for the entire population is not comparable

Healthy People 2020 objective is based on both underlying and contributing cause of death which requires use of multiple cause of death files; California's data exclude multiple/contributing causes of death

Source: California Department of Public Health

## Section 7: Maternal and Infant Health

This section includes:

---

- Demographic overview of females age 15 to 44 years in USC Arcadia Hospital Service Area
- Summary of births in USC Arcadia Hospital Service Area
- Maternal and infant health outcomes in Los Angeles County benchmarked to Healthy People 2020 targets
- Maternal and infant outcomes in Los Angeles County compared to California

Key used to summarize USC Arcadia Hospital Service Area experiences benchmarked to Healthy People 2020 Targets:

---

Target Met

Target Not Met

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix A: Service Area Description
- Appendix B: Age Group Detail
- Appendix C: Maternal Health

## Females Age 15 to 44 Years

**What's Being Measured** Females 15 to 44 years of age (childbearing age).

**How the Measure is Defined** The percentage of women age 15 to 44 years is calculated by dividing this age group of females by the total population (includes males).

### **Service Area Experience**

#### **Females Age 15 to 44 Years**

USC Arcadia Hospital Service Area

2022

<b>Female Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
15 to 17 Years	13,512	1.8%
18 to 20 Years	13,632	1.8%
21 to 24 Years	18,718	2.5%
25 to 34 Years	55,255	7.2%
35 to 44 Years	51,115	6.7%
<b>Total Women 15 to 44 Years</b>	<b>152,232</b>	<b>19.9%</b>
Total Population	763,737	100.0%

*Note: Percentages rounded*

*Source: Claritas*

# Number of Births

**What's Being Measured** The number of live births.

**How the Measure is Defined** The three-year average is calculated by dividing the sum of the annual births by three.

## **Service Area Experience**

### **Number of Live Births**

USC Arcadia Hospital Service Area

*Three-Year Average (2018 to 2020)*

<b>Year</b>	<b>Number of Births</b>
2018	8,309
2019	8,394
2020	7,036
<b>Three-Year Average</b>	<b>7,913</b>

*Source: California Department of Public Health*

## **Births with Early Entry into Prenatal Care**

**What's Being Measured** The rate of live births to mothers with early prenatal care during pregnancy.

**How the Measure is Defined** Early prenatal care is defined as the percentage of mothers who begin prenatal care in the first trimester. The rate is expressed per 100 live births and excludes births with unknown prenatal care.

**Why the Measurement is Helpful** Prenatal care is most effective when it starts early and continues throughout pregnancy. It can help prevent and address health problems in mothers and babies. Interventions to increase access to health care can help more women get the prenatal care they need.

**Healthy People 2020 Objective** Increase the proportion of pregnant women who receive prenatal care beginning in the first trimester to 84.8% of live births.

### **Los Angeles County Experience**

**Measurement Period** 2018 to 2020 (Three-Year Average)

87.0% of births were to mothers with prenatal care beginning in the first trimester

**Source of Data** California Department of Public Health

# Infant Birth Weight

**What's Being Measured** The rate of low birth weight infants.

**How the Measure is Defined** Low birth weight is defined as live births weighing less than 2,500 grams (5.5 pounds). Normal birth weight is defined as 2,500 grams or more. The rates are expressed per 100 live births and exclude births with unknown birth weight.

**Why the Measurement is Helpful** Low birth weight is associated with long-term disabilities, such as cerebral palsy, autism, mental retardation, vision and hearing impairments and other developmental disabilities and is the risk factor most closely associated with neonatal death. Smoking accounts for 20 to 30 percent of all low birth weight infants in the United States. The effect of smoking on low birth weight rates appears to be attributable to intrauterine growth retardation rather than to preterm delivery. Despite the low proportion of pregnancies resulting in low birth weight infants, expenditures for the care of low birth weight infants total more than half of the costs incurred for all newborns.

**Healthy People 2020 Objective** Reduce low birth weight infants to 7.8%.

## **Los Angeles County Experience**

**Measurement Period** 2018 to 2020 (Three-Year Average)

7.4% of infants were low birth weight

**Source of Data** California Department of Public Health

# Infant Mortality

**What's Being Measured** The rate of infant deaths.

**How the Measure is Defined** Infant mortality is the number of deaths among infants under one year of age. The rate is expressed per 1,000 live births.

**Why the Measurement is Helpful** Every year in the United States, thousands of infants die from causes like preterm birth, low birth weight, and sudden infant death syndrome. Although the rate of infant deaths has fallen over the past decade, there are disparities by race/ethnicity, income, and geographic location. Equitable, high quality care for mothers and babies and community-based interventions can help reduce the rate of infant deaths.

**Healthy People 2020 Objective** Reduce the rate of all infant deaths to no more than 6.0 per 1,000 live births.

## **Los Angeles County Experience**

**Measurement Period** 2017 to 2019 (Three-Year Average)

3.6 infant deaths per 1,000 live births

**Source of Data** California Department of Public Health

## Summary of Maternal and Infant Health Indicators and Comparison to Healthy People 2020 Targets

Note: Findings are based on live births that occurred in the service area during 2018 to 2020, three-year averages of pregnancy and birth outcomes that occurred among residents of Los Angeles County during 2018 to 2020, and three-year averages of infant mortality among infants during 2017 to 2019

During the three-year period from 2018 through 2020, there were 7,913 births a year in the service area.

### Number of Live Births

USC Arcadia Hospital Service Area

Three-Year Average (2018 to 2020)

Year	Number of Births
2018	8,309
2019	8,394
2020	7,036
<b>Three-Year Average</b>	<b>7,913</b>

Source: California Department of Public Health

When comparing maternal and infant health indicators in Los Angeles County to Healthy People 2020 objectives, the county met all of the objectives. The county experience compared to Healthy People 2020 national objectives is summarized in the table below.

### Summary of Maternal and Infant Health Indicators

Los Angeles County, California and Healthy People 2020 Targets

2018 to 2020 and 2017 to 2019

Indicator	Los Angeles County		California Rate	Target Rate
	Rate	Status		
<b>Health Access and Pregnancy Outcome (2018 to 2020)</b>				
Early Prenatal Care	87.0%	+	86.5%	84.8%
Low Birth Weight Infants	7.4%	+	7.0%	7.8%
<b>Infant Mortality (2017 to 2019)</b>				
Infant Mortality	3.6	+	3.9	6.0

Note: Target rate is Healthy People 2020 objective

Source: California Department of Public Health

## Section 8: Child and Adolescent Health

This section includes:

---

- Demographic overview of children and youth age 0 to 20 years in USC Arcadia Hospital Service Area
- Summary of students enrolled in free or reduced fee meals
- Summary of four-year adjusted graduation rates among high school students attending in schools in USC Arcadia Hospital Service Area
- Findings from the 2021 California Health Interview Survey for SPA 3 benchmarked to Healthy People 2020 targets
- Summary of child abuse and neglect in Los Angeles County
- Child and adolescent health indicators in SPA 3 compared to Los Angeles County and California

Key used to summarize SPA 3 experiences benchmarked to Healthy People 2020 Targets:

	Target Met
	Target Not Met
	Result is Statistically Unstable

Detailed information – at the ZIP Code level – can be found in:

5 to 9 Years	43,228	5.7%
10 to 14 Years	44,346	5.8%
15 to 17 Years	27,701	3.6%
18 to 20 Years	27,705	3.6%
<b>Total 0 to 20 Years</b>	<b>183,472</b>	<b>24.0%</b>
Total Population	763,737	—

*Note: Percentages rounded*

*Source: Claritas*

## Students Enrolled in Free or Reduced Price Meals

**What's Being Measured** Students enrolled in the Free or Reduced Price Meal Programs.

**How the Measure is Defined** The Free or Reduced Price Meal Program is a federal program administered by the U.S. Department of Agriculture. Program participation is by application and is based on income of the child's parent or guardian. Students enrolled in the program is defined as a student's family has met eligibility criteria and student is "signed up" to participate. Data is for the 2021/2022 school year and is from the California Department of Education website.

**Why the Measurement is Helpful** Students enrolled in the program provides information regarding the socioeconomic status of families with children attending public schools.

**Healthy People 2020 Objective** None established.

### Service Area Experience

#### Students Enrolled in Free or Reduced Price Meals

School Districts in USC Arcadia Hospital Service Area  
2021/2022 School Year

School District	Free/Reduced Price Meals	
	Number	Percent
Alhambra Unified	8,165	53.5%
Arcadia Unified	2,400	27.7%
Azusa Unified	5,526	76.9%
Baldwin Park Unified	11,913	91.3%
Duarte Unified	2,717	53.1%
El Monte City Elementary	6,302	86.8%
El Monte Union High	6,985	86.0%
Garvey Elementary	2,748	64.1%
Glendora Unified	2,835	42.5%
Monrovia Unified	2,691	52.3%

	Number	Percent
<b>Comparison Data</b>		
Los Angeles County	898,036	67.2%
California	3,404,572	57.8%

Source: California Department of Education

# Four-Year Adjusted Graduation Rate

**What's Being Measured** Four-year adjusted cohort graduation rate for the selected year,

**How the Measure is Defined** The four-year adjusted graduation rate (ACGR) is the number of students who graduate from high school in four years with a regular high school diploma divided by the number of students who form the adjusted cohort for the graduating class. The four-year cohort is based on the number of students who enter grade 9 for the first time adjusted by adding into the cohort any student who transfers in later during grade 9 or during the next three years and subtracting any student from the cohort who transfers out, emigrates to another country, transfers to a prison or juvenile facility or dies during that same period. For the ACGR, a “regular high school diploma” is the standard high school diploma awarded to the preponderance of students in a State that is fully aligned with the State’s standards and does not include a general equivalency diploma, certificate of completion, certificate of attendance, or any other similar or lesser credential, such as a diploma based on meeting Individualized Education Program goals. Data is for the 2021/2022 school year and is from the California Department of Education website.

**Why the Measurement is Helpful** There’s a strong connection between education and health – for example, higher levels of education are linked to a lower risk of death later in life. But many high school students don’t graduate, and graduation rates are lower in some racial/ethnic groups. Programs including vocational training, alternative schools, social-emotional skills training, and counseling can help more students graduate from high school.

**Healthy People 2020 Objective** Increase the proportion of high school students who graduate in four years with a regular diploma to 87%.

## Service Area Experience

### **Four-Year Adjusted Graduation Rate**

School Districts in USC Arcadia Hospital Service Area

2020/2021 School Year

<b>School District</b>	<b>Graduation Rate</b>
Alhambra Unified	95.7%
Arcadia Unified	97.8%
Azusa Unified	85.7%
Baldwin Park Unified	92.1%
Duarte Unified	89.8%
El Monte Union High	84.2%

<b>School District</b>	<b>Graduation Rate</b>
Glendora Unified	96.8%
Monrovia Unified	97.2%
Pasadena Unified	84.8%
San Gabriel Unified	96.0%
Temple City Unified	95.5%
<b>Comparison Data</b>	
Los Angeles County	86.3%
California	87.7%

*Source: California Department of Education*

# Medical Insurance

**What's Being Measured** Persons age 0 to 17 years with medical insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health care coverage includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** About 1 in 10 people in the United States don't have health insurance. People without health insurance are less likely to have a primary care provider and they may not be able to afford the health care services and medications they need. Strategies to increase insurance coverage rates are critical for making sure more people get important health care services, like preventive care and treatment for chronic illnesses.

**Healthy People 2020 Objective** Increase the proportion of persons age 0 to 17 years with medical insurance to 100%.

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

97% of children age 0 to 17 years have medical insurance

**Source of Data** UCLA Center for Health Policy Research

## Source of Ongoing Care

**What's Being Measured** Persons age 0 to 17 years with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons age 0 to 17 years who have a specific source of ongoing care to 100%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

86% of children age 0 to 17 years have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Obese Adolescents

**What's Being Measured** The proportion of teens age 12 to 17 years who are obese.

**How the Measure is Defined** Overweight or obese adolescents are defined as those who have a Body Mass Index (or BMI) at or above the gender- and age-specific 95<sup>th</sup> percentile of BMI based on the revised CDC Growth Charts for the United States. Results are based on self-reported data by adolescents and are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Many children and adolescents in the United States are obese. Obesity is linked to a higher risk for diseases and conditions like high blood pressure, high cholesterol, diabetes, asthma, anxiety, and depression. In addition, children who are obese are more likely to be bullied and have obesity as adults. Evidence suggests that intensive behavioral programs that use more than one strategy are an effective way to reduce childhood obesity. Policy and school curriculum changes that make it easier for children and adolescents to eat healthy and get physical activity can also help reduce obesity.

**Healthy People 2020 Objective** Reduce the proportion of adolescents age 12 to 17 years who are obese to 16.1%.

## **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

7% of adolescents age 12 to 17 years are obese

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adolescents age 14 to 17 years who reported having smoked on one or more of the past 30 days.

**How the Measure is Defined** Teens were asked if they smoked cigarettes in the past 30 days. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. Some groups are more likely to use tobacco than others. Population level interventions to reduce tobacco use include price increases, mass media campaigns, and smoke-free policies.

**Healthy People 2020 Objective** Reduce cigarette smoking among adolescents (in grades 9 through 12) to 16% or less.

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

5% of adolescents age 14 to 17 years smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Binge Drinking

**What's Being Measured** The proportion of adolescents age 12 to 17 years who reported binge drinking in the past 30 days.

**How the Measure is Defined** Teens were asked the number of alcoholic beverages they consumed at the same time or within a couple of hours during the past month. Binge drinking is defined as drinking 5 or more alcoholic beverages for males or 4 or more alcoholic beverages for females at the same time or within a couple of hours of each other during the past 30 days. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Binge drinking is associated with a profound social harm, economic costs as well as increased disease burden. Binge drinking is more common in males, during adolescence and young adulthood. Most binge drinkers are not familiar with the risks associated with binge drinking. Heavy regular binge drinking is associated with adverse effects on neurologic, cardiac, gastrointestinal, hematologic, immune, musculoskeletal organ systems as well as increasing the risk of alcohol induced psychiatric disorders. A US-based review of the literature found that up to one third of adolescents binge drink, with six percent reaching the threshold of having an alcohol-related substance use disorder. Binge drinking during adolescence is associated with traffic accidents and other types of accidents, violent behavior as well as suicide. The more often a child or adolescent binge drinks and the younger they are the more likely that they will develop an alcohol use disorder including alcoholism. A large number of adolescents who binge drink also consume other psychotropic substances.

**Healthy People 2020 Objective** Reduce the proportion of adolescents age 12 to 17 years who reported they engaged in binge drinking during the past month to 8.6%

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

2% of adolescents age 12 to 17 years engaged in binge drinking

**Source of Data** UCLA Center for Health Policy Research

# Child Abuse and Neglect

**What's Being Measured** Substantiated cases of child abuse and neglect (child maltreatment) among children age 0 to 17 years.

**How the Measure is Defined** The rate of substantiated child abuse and neglect incidents is determined by the number of child abuse and neglect reports that warrant an in-person investigation and are then substantiated. The rate is expressed per 1,000 children in the population age 0 to 17 years. The source of the data is the Center for Social Sciences Research at University of California at Berkeley. The data covers January 1 to December 31, 2021.

**Why the Measurement is Helpful** Child abuse and neglect are found in families across the social spectrum, and cases are becoming more complex, with more entrenched risk factors. Social isolation, family disorganization, and financial stress and poverty, can also trigger child abuse. Abused children often experience higher rates of suicide, depression, substance abuse, difficulties in school, and other behavioral problems in later life. Abused children are also at greater risk of becoming delinquents, mistreating their own children, and becoming involved in violent partner relationships as teens and adults.

**Healthy People 2020 Objective** Reduce the incidence of child maltreatment to no more than 8.5 per 1,000 children aged 18 and younger.

## Los Angeles County Experience

**Measurement Period** 2021

7.5 cases of child abuse per 1,000 children

**Source of Data** Center for Social Sciences Research at University of California at Berkeley

# Summary of Child and Adolescent Health and Comparison to Healthy People 2020 Targets

Note: Findings are based on 2021 California Health Interview Survey for SPA 3

When comparing child and adolescent health indicators in the SPA to Healthy People 2020 objectives, the SPA results were statistically reliable only for health access: usual source of care. For individuals under age 18 years, the SPA did not meet the Healthy People 2020 objective. The SPA experience compared to Healthy People 2020 national objectives is summarized in the table below.

## Summary of Child and Adolescent Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2020 Targets

2021

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Access</b>					
Insured All or Part of Year Age 0 to 17 Years	97%	*	99%	99%	100%
Usual Source of Ongoing Care Age 0 to 17 Years	86%	-	87%	87%	100%
<b>Health Behaviors</b>					
Obese Age 12 to 17 Years	7%	*	18.1%	19.1%	16.1%
Currently Smoke Cigarettes Age 14 to 17 Years	5%	*	*2.1%	*0.9%	16.0%
Binge Drinking in Past Month Age 12 to 17 Years	2%	*	*3.6%	4.2%	8.6%

Notes:

Asterisk indicates result is statistically unstable

Target rate is Healthy People 2020 objective

## Section 9: Adult Health

This section includes:

---

- Demographic overview of adults age 21 to 64 years in USC Arcadia Hospital Service Area
- Findings from the 2021 California Health Interview Survey for SPA 3 benchmarked to Healthy People 2020 targets
- Adult health indicators in SPA 3 compared to Los Angeles County and California

Key used to summarize SPA 3 experiences benchmarked to Healthy People 2020 Targets:

---

Target Met

Target Not Met

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix C: Age Group Detail

## Adults Age 21 to 64 Years

**What's Being Measured** Adults 21 to 64 years of age.

**How the Measure is Defined** The percentage of the population 21 to 64 years is calculated by dividing this age group by the total population.

### Service Area Experience

#### **Adults Age 21 to 64 Years**

USC Arcadia Hospital Service Area

2022

<b>Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
21 to 24 Years	37,786	4.9%
25 to 34 Years	112,785	14.8%
35 to 44 Years	101,930	13.3%
45 to 54 Years	99,471	13.0%
55 to 64 Years	99,158	13.0%
<b>Total 21 to 64 Years</b>	<b>451,130</b>	<b>59.1%</b>
Total Population	763,737	—

*Note: Percentages rounded*

*Source: Claritas*

# Medical Insurance

**What's Being Measured** Adults age 18 to 64 years with health insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of adults with medical insurance includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Uninsured persons include those without health insurance for all or part of the year. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** About 1 in 10 people in the United States don't have health insurance. People without health insurance are less likely to have a primary care provider and they may not be able to afford the health care services and medications they need. Strategies to increase insurance coverage rates are critical for making sure more people get important health care services, like preventive care and treatment for chronic illnesses.

**Healthy People 2020 Objective** Increase the proportion of persons age 18 to 64 years with medical insurance to 100%.

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

92% of adults age 18 to 64 years have medical insurance

**Source of Data** UCLA Center for Health Policy Research

## Source of Ongoing Care

**What's Being Measured** Adults age 18 to 64 years with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons age 18 to 64 years who have a specific source of ongoing care to 89.4%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

84.9% of adults age 18 to 64 years have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Healthy Weight and Obesity

**What's Being Measured** The proportion of adults age 20 to 64 years who are at a normal, healthy weight and those that are obese.

**How the Measure is Defined** Adults were asked their height and weight. These measures were used to calculate a BMI (or Body Mass Index). BMI is calculated by dividing weight (in kilograms) by height squared (in meters). A BMI from 0 to 18.49 is described as underweight, a BMI from 18.5 to 24.99 is described as normal, healthy weight; a BMI from 25.0 to 29.99 is described as overweight, and a BMI of 30.0 or higher is described as obese. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** About 2 in 5 adults and 1 in 5 children and adolescents in the United States are obese, and many others are overweight. Obesity is linked to many serious health problems, including Type 2 diabetes, heart disease, stroke, and some types of cancer. Some racial/ethnic groups are more likely to be obese, which increases the risk of chronic diseases.

## Healthy People 2020 Objectives

Increase the proportion of adults age 20 years and older who are at a healthy weight to 33.9% (BMI of 18.5 to 24.99).

Reduce the proportion of adults age 20 years and older who are obese to 30.5% (BMI of 30 or more).

## SPA 3 (San Gabriel Valley) Experience

### Measurement Period 2021

33.6% of adults age 20 to 64 years are at a healthy weight (rate is within 95% confidence interval)

33.0% of adults age 20 to 64 years are obese (rate is within 95% confidence interval)

**Source of Data** UCLA Center for Health Policy Research

# High Blood Pressure

**What's Being Measured** The proportion of adults age 18 to 64 years who were ever diagnosed with high blood pressure.

**How the Measure is Defined** Adults were asked "Has a doctor ever told you that you have high blood pressure?" Results are the sum of has/had high blood pressure and has/had borderline high blood pressure. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Many adults in the United States have high blood pressure, or hypertension. Controlling or lowering blood pressure can help prevent chronic kidney disease, heart attack, heart failure, and stroke. Screening for high blood pressure and taking steps to lower it through lifestyle changes – and medication when appropriate – can help keep blood pressure under control.

**Healthy People 2020 Objective** Reduce the proportion of adults age 18 years and older with high blood pressure to 26.9%.

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

23.1% of adults age 18 to 64 years diagnosed with high blood pressure

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adults age 18 to 64 years who currently smoke cigarettes.

**How the Measure is Defined** Adults were asked if they smoked cigarettes in the past 30 days. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. Some groups are more likely to use tobacco than others. Population level interventions to reduce tobacco use include price increases, mass media campaigns, and smoke-free policies.

**Healthy People 2020 Objective** Reduce cigarette smoking among adults age 18 years and older to 12% or less.

## **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

6.0% of adults currently smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Binge Drinking in Past Month

**What's Being Measured** The proportion of adults age 18 to 64 years who engaged in binge drinking in the past month.

**How the Measure is Defined** Adults were asked if engaged in binge drinking in the past 30 days. Binge drinking is defined differently for both males and females. For males, binge drinkers are those that have had five or more drinks on at least one occasion in the past month. For females, binge drinkers are those that have had four or more drinks on at least one occasion in the past month. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Binge drinking is a serious but preventable health problem. Binge drinking is the most common, costly, and deadly pattern of excessive alcohol use in the United States. Most people who binge drink do not have a severe alcohol use disorder. However, binge drinking is a harmful risk behavior associated with serious injuries and multiple diseases. It is also associated with an increased risk of alcohol use disorder.

**Healthy People 2020 Objective** Reduce binge drinking among adults age 18 years and older to 24.3% or less.

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

16.9% of adults engaged in binge drinking in the past month

**Source of Data** UCLA Center for Health Policy Research

# Summary of Adult Health and Comparison to Healthy People 2020 Targets

Note: Findings are based on 2021 California Health Interview Survey for SPA 3

When comparing adult health indicators in the SPA to Healthy People 2020 objectives, the SPA did not meet the objectives related to health access for: medical insurance (insured all or part of the year) and usual source of ongoing care. The SPA experience compared to Healthy People 2020 national objectives is summarized in the following table.

## Summary of Adult Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2020 Targets  
2021

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Access</b>					
Insured All or Part of Year Age 18 to 64 Years	92%	-	93%	94%	100%
Usual Source of Ongoing Care Age 18 to 64 Years	84.9%	-	81.2%	83.2%	89.4%
<b>Health Behaviors</b>					
Healthy Weight Age 20 to 64 Years	33.6%*	+	32.5%	34.3%	33.9%
Obese Age 20 to 64 Years	33.0%*	+	30.9%	29.6%	30.5%
Diagnosed with High Blood Pressure Age 18 to 64 Years	23.1%	+	19.2%	19.4%	26.9%
Currently Smoke Cigarettes Age 18 to 64 Years	6.0%	+	5.6%	6.8%	12.0%
Engaged in Binge Drinking in Past Month Age 18 to 64 Years	16.9%	+	20.8%	21.1%	24.3%

## Source of Ongoing Care

**What's Being Measured** Persons age 65 years and older with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care.

**Healthy People 2020 Objective** Increase the proportion of persons age 65 years and older who have a specific source of ongoing care to 100%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **SPA 3 (San Gabriel Valley) Experience**

**Measurement Period** 2021

94% of seniors age 65 years and older have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Healthy Weight and Obesity

**What's Being Measured** The proportion of seniors age 65 years and older who are at a normal, healthy weight and those that are obese.

**How the Measure is Defined** Adults were asked their height and weight. These measures were used to calculate a BMI (or Body Mass Index). BMI is calculated by dividing weight (in kilograms) by height squared (in meters). A BMI from 0 to 18.49 is described as underweight, a BMI from 18.5 to 24.99 is described as normal, healthy weight; a BMI from 25.0 to 29.99 is described as overweight, and a BMI of 30.0 or higher is described as obese. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** About 2 in 5 adults and 1 in 5 children and adolescents in the United States are obese, and many others are overweight. Obesity is linked to many serious health problems, including Type 2 diabetes, heart disease, stroke, and some types of cancer. Some racial/ethnic groups are more likely to be obese, which increases the risk of chronic diseases.

## Healthy People 2020 Objectives

Increase the proportion of adults age 20 years and older who are at a healthy weight to 33.9% (BMI of 18.5 to 24.99).

Reduce the proportion of adults age 20 years and older who are obese to 30.5% (BMI of 30 or more).

## SPA 3 (San Gabriel Valley) Experience

### Measurement Period 2021

45.5% of seniors age 65 years and older are at a healthy weight

27.6% of seniors age 65 years and older are obese

**Source of Data** UCLA Center for Health Policy Research

# High Blood Pressure

**What's Being Measured** The proportion of seniors 65 years and older who were ever diagnosed with high blood pressure or high blood cholesterol.

**How the Measure is Defined** Adults were asked "Has a doctor ever told you that you have high blood pressure?" Results are the sum of has/had high blood pressure and has/had borderline high blood pressure. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Many adults in the United States have high blood pressure, or hypertension. Controlling or lowering blood pressure can help prevent chronic kidney disease, heart attack, heart failure, and stroke. Screening for high blood pressure and taking steps to lower it through lifestyle changes – and medication when appropriate – can help keep blood pressure under control.

**Healthy People 2020 Objective** Reduce the proportion of adults age 18 years and older with high blood pressure to 26.9%

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

50.0% of seniors age 65 years and older have high blood pressure

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adults age 65 years and older who currently smoke cigarettes.

**How the Measure is Defined** Adults were asked if they smoked cigarettes in the past 30 days. Results are from the 2021 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. Some groups are more likely to use tobacco than others. Population level interventions to reduce tobacco use include price increases, mass media campaigns, and smoke-free policies.

**Healthy People 2020 Objective** Reduce cigarette smoking among adults age 18 years and older to 12% or less.

## SPA 3 (San Gabriel Valley) Experience

**Measurement Period** 2021

1.7% of seniors age 65 years and older smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

## Summary of Senior Health Indicators and Comparison to Healthy People 2020 Targets

Note: Findings are based on 2021 California Health Interview Survey for SPA 3

When comparing senior health indicators in the SPA to Healthy People 2020 objectives, the SPA did not meet the objectives related to health behaviors for: diagnosed with high blood pressure. The SPA experience compared to Healthy People 2020 national objectives is summarized in the table below.

### Summary of Senior Health Indicators

SPA 3 Compared to Los Angeles County, California and Healthy People 2020 Targets  
2021

Indicator	SPA 3		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Access</b>					
Usual Source of Ongoing Care Age 65 Years and Older	94%	*	94%	95%	100%
<b>Health Behaviors</b>					
Healthy Weight Age 65 Years and Older	45.5%	+	38.8%	37.5%	33.9%
Obese Age 65 Years and Older	27.6%	+	26.9%	25.4%	30.5%
Diagnosed with High Blood Pressure Age 65 Years and Older	50.0%	-	56.4%	54.6%	26.9%
Currently Smoke Cigarettes Age 65 Years and Older	1.7%	*	3.3%	3.7%	12.0%

Note:

Target rate is Healthy People 2020 objective

# Section 11: Community Consultation

This section includes:

---

- Overview of the community consultation process
- Analysis of the community consultation

Additional information regarding participants in the community consultation can be found in:

---

- Appendix D: Community Consultation Participants

# Overview

The project consultant completed 13 telephone interviews (70 percent response rate) during December 2022. This timing was selected so as to obtain responses outside of a COVID-19 surge and/or recent vaccination/booster implementation, after the effective date of the hospital's affiliation with Keck Medicine of USC, and after the midterm elections.

Prior to conducting the interviews, leadership from USC Arcadia Hospital and the project consultant participated in the San Gabriel Valley Hospital Collaborative to develop a workplan related to gathering input from community stakeholders. In addition, the project consultant reviewed the findings from the community input for three participating hospitals in the collaborative to identify key themes.<sup>1</sup> These themes included: access to care (primary care, prevention services and screenings), chronic diseases, mental health, substance abuse, housing and homelessness, and COVID-19.

USC Arcadia Hospital leadership and staff identified 20 contacts for telephone interviews. Individuals selected for interviews represented Los Angeles County Department of Public Health, city/cities departments in the hospital service area, non-profit community-based health and social organizations serving populations such as the poor, seniors, and Chinese residents; physicians with clinical practices in the community, and a business owner. The project consultant recommended that the hospital use the same open-ended questions as applied in prior community health needs assessments, so as to obtain respondents opinions of important health issues, without favoring prompted questions related to COVID-19. Once individuals confirmed interest in participation, a letter – describing the purpose of the phone survey and the questions to be posed in the upcoming telephone interview – was distributed electronically (via email) to all contacts.

Those participating in the community consultation were asked to respond to the following questions:

1. In your opinion, what are the top three health issues in the San Gabriel Valley?
2. Are there specific neighborhood areas or populations affected by these health issues?
3. What specific actions should be undertaken to address these health issues?
4. What specific actions or collaborations could USC Arcadia Hospital undertake to address these community health issues?

---

<sup>1</sup> 2022 Community Health Needs Assessments posted online were reviewed for Huntington Hospital, Kaiser Foundation Hospital – Baldwin Park, and Pomona Valley Hospital Medical Center.

During the course of completing the telephone interviews, several respondents commented that their responses were developed from speaking to others in the organization, review of data, outreach and hearing concerns in the community.

Following completion of the interviews, responses were analyzed and summarized based on general concepts and common themes.

## **Community's Top Health Issues**

The following were identified as the community's top health issues (based on frequency of overall mention):

- Access to health services
- Availability of mental health services
- Screening, care, and management of individual health

Each issue is discussed below.

### **Access to Health Services**

Respondents participating in the community consultation identified the need for greater availability of physical – illness or accident related – health care services. These health needs include: access to primary care physicians as well as appointments with specialists in the community (as compared to in-hospital emergency departments), and programs and services to address food insecurity and other social determinants of health such as language and culture.

Many of those participating in the community consultation also described the need for additional nurse staffing hospital-wide – an issue that is endemic across the entire San Gabriel Valley as well as all of Southern California. Staffing challenges were identified as more problematic for smaller hospitals that cannot easily pay higher wages like larger hospitals and health systems. Additionally, some of those participating in the community consultation expressed comments related to delays in the movement of patients: within the hospital – from emergency departments to inpatient beds (related to nurse staffing), from the hospital to the patient's home or skilled nursing facility (when a patient's physical condition no longer requires acute hospital care), and when patients need to access primary or specialty care at a physician office or clinic in the community.

### **Availability of Mental Health Services**

Those participating in the community consultation identified a range of needed, but not readily available, mental health services, including social and emotional support accentuated by the COVID-19 pandemic and its associated mandates or personal practices of social isolation and masking. Mentioned specifically as needed mental health services were substance abuse rehabilitation centers, inpatient psychiatric beds, outpatient clinics, and long-term mental health care. Also identified as a critical need were resources to address the complicated needs of persons experiencing homelessness.

## **Screening, Care, and Management of Individual Health**

Respondents participating in the community consultation identified the following health conditions as persistent across many years:

- Childhood asthma (leading cause of absenteeism among students)
- Cancers
- Hypertension
- Heart disease
- Diabetes
- Obesity
- Infectious diseases such as tuberculosis
- Mental health
- Substance abuse
- Arthritis
- Flu shots and vaccinations (including boosters for COVID-19)
- Physical activity in seniors

To effectively address some of these health conditions, key needs would include increased screening to improve disease identification, treatment, and management – plus greater adoption of healthy lifestyles that include exercise and healthy eating, education, and support.

Some respondents identified the need for increased availability of patient navigators to guide individuals after learning of a positive diagnosis related to breast cancer. Armed with a detailed understanding of available resources, navigators assist patients to obtain needed referrals to a variety of services including treatment and support groups, as well as transportation, in-home support services, disability insurance, and medication delivery.

## **Neighborhood Areas or Populations Most Affected by Health Issues**

Those participating in the community consultation generally agreed that all persons in the San Gabriel Valley were affected by limited to access to physical health services and overall availability of mental health services. The basis for some of this reasoning related to the limited abilities of hospital emergency rooms – designed for severe accidents and illnesses, but not for individuals who experience mental health crises due to homelessness or problems with substance abuse. Access to mental health services also adversely affected Asian Americans where there is a stigma associated with care for individuals who are alone in the US without family or social support.

With regards to personal health and health conditions such as asthma, diabetes, and high blood pressure, some of those interviewed identified the unique needs of individuals with limited or no English proficiency, including Asians and Latinos; low-income families, seniors, and children exposed to tobacco smoke, pollution, or poor air quality (related to asthma).

## **Specific Actions Needed to Take to Address Health Issues**

Participants in the community consultation suggested specific actions needed to take to address identified health issues:

Related to access to and availability of health services:

- Improved patient throughput at hospitals, via stronger discharge planning and increased nursing staff
- Teaching adult children how to care for elderly patients in the home (with phone access to nurses and physicians)
- More reasonable expectations of patients regarding hospital care
- Better access to outpatient care
- More collaboration among providers beyond hospitals to address social determinants of health
- More mental health professionals who practice in the San Gabriel Valley
- More case managers to work with homeless persons upon discharge from hospitals
- More resources that address key needs of the homeless community

Related to food insecurity:

- More collaboration with multiple partners to make nutritious foods available to those in need

Related to management of individual health:

- Culturally and linguistically appropriate education (specifically to Asian Americans)
- Increased public reminders of the importance of exercise, healthy lifestyles, and early detection
- In-person or virtual health education programs, workshops, and support groups
- More educational materials mailed to households
- Increase formal education, beginning in elementary schools, related to healthy eating habits
- Pro-active about own health

## **Collaborative Roles or Actions USC Arcadia Hospital Could Take to Address Community Health Issues**

Related to access to health services:

- Increased interpretation services for individuals with low English language proficiency
- More materials printed in Mandarin (and available through certain community organizations)
- Training of staff at community organizations to help patients navigate the health care system
- Increased nurse staffing and nurse management
- Social workers better trained to direct patients to available mental health services
- More mental health clinicians doing outreach
- Consider opening a mental health rehabilitation center

Related to food insecurity:

- Conduct screenings at the hospital and refer patients in need to agencies who provide healthy food
- Assist with the distribution of food to those in need

Related to management of individual health:

- Asthma – Work with schools to learn more about student absenteeism; coordinate with health care providers
- Attend and host more community health fairs and other events
- Use social media to inform and to reduce misinformation
- Continue to offer lectures and education sessions at community centers
- Stronger coordination with local churches and temples, schools, PTAs, neighborhood clubs, and ethnic organizations
- More education in different languages
- Refer patients to Chinese nonprofit organizations for non-medical care and support services

## Section 12: Priority Community Health Needs

This section includes:

---

- Description of the process and criteria used to identify priority community health needs
- Summary and description of priority community health needs

## **Process and Criteria Used**

In preparing the community health needs assessment, USC Arcadia Hospital combined quantitative data about service area demographics, availability of health insurance, health access to and utilization of key services, health status, and health behaviors with qualitative data, including opinions of community leaders regarding important health issues in the community. Many who provided these opinions – including local health providers and representatives from Los Angeles County Departments of Public Health – are active locally in the community and offer valuable perspectives.

The following criteria were used to identify and prioritize significant health needs in the community:

- Healthy People 2020 targets not met
- Foci of Healthy People 2030
- Number of persons affected
- Identification and/or validation as an important health issue in the community consultations
- Identified by community organizations as an opportunity to work collaboratively to address health issue

## **Framework of Healthy People 2030**

The United States Department of Health and Human Services launched Healthy People 2030, the fifth iteration of the Healthy People initiative. Healthy People 2030 was developed through a multi-year process with input from members of the public, public and private organizations, advisory committees comprised of federal and non-federal subject matter experts, and federal agencies such as National Center for Health Statistics. Healthy People 2030 features a framework that includes its vision, mission, foundational principles, and overarching goals. In addition, Healthy People 2030 has a new slate of 355 core objectives with targets, as well as 115 developmental and 40 new research objectives. The goals for this decade include the following:

- Attain healthy, thriving lives and well-being, free of preventable disease, disability, injury and premature death
- Eliminate health disparities, achieve health equity, and attain health literacy to improve the health and well-being of all
- Create social, physical, and economic environments that promote attaining full potential for health and well-being for all
- Promote healthy development, healthy behaviors, and well-being across all life stages
- Engage leadership, key constituents, and the public across multiple sectors to take action and design policies that improve the health and well-being of all

The Healthy People 2030 core objectives were selected based on the following criteria:

- National importance: Ability to have direct impact or influence on health, broad and comprehensive applicability, substantial burden, and national health priority
- Evidence base: Existing evidence of effective interventions to achieve the objective
- Disparities and equity: Assessment of health disparities with a focus on health equity

The Healthy People 2030 objectives are organized into various topic areas, as follows:

- Health conditions

Listed alphabetically: addiction, arthritis, blood disorders, cancer, chronic kidney disease, chronic pain, dementias, foodborne illness, healthcare-associated infections, heart disease and stroke, infectious disease, mental health and mental disorders, oral conditions, osteoporosis, overweight and obesity, pregnancy and childbirth, respiratory disease, sensory or communication disorders, and sexually transmitted infections

- Health behaviors

Listed alphabetically: child and adolescent development, drug and alcohol use, emergency preparedness, family planning, health communication, injury prevention, nutrition and healthy eating, physical activity, preventive care, safe food handling, sleep, tobacco use, vaccination, and violence prevention

- Populations

Listed alphabetically: adolescents, children, infants, LGBT, men, older adults, parents or caregivers, people with disabilities, women, and workforce

- Settings and systems

Listed alphabetically: community, environmental health, global health, health care, health insurance, health IT, health policy, hospital and emergency services, housing and homes, public health infrastructure, schools, transportation, and workplace

- Social determinants of health

Listed alphabetically: economic stability, education access and quality, health care access and quality (such as emergency department wait times, adults who get recommended evidence-based preventive care, access to medical care when needed, access to prescription medicines when

needed, usual primary care provider, use of telehealth to improve access to health services, cancer screenings, health insurance, early and adequate prenatal care), neighborhood and built environment, and social and community context

## **Priority Community Health Needs**

The following priority health needs were identified in the community health needs assessment:

- Access to health services
- Availability of mental health services
- Screening, care, and management of individual health

Dimensions of each of these priority health needs are highlighted below.

Demographics and other health status indicators identified particular populations in USC Arcadia Hospital service area and/or SPA 3 who are in need:

- Persons age 55 years and older
- Persons speaking an Asian language or dialect at home
- Uninsured persons under age 65 years
- Persons no usual source of ongoing care
- Seniors with high blood pressure

### **Access to Health Services**

- Access to primary care physicians
- Appointments with specialists
- Programs and services to address food insecurity
- Hospital-related challenges – additional nurse staffing and improved patient flow from emergency departments to inpatient beds and from inpatient beds to home, from where patients may access primary and specialty care services in the community

### **Availability of Mental Health Services**

- Social and emotional support services
- Access to inpatient and outpatient mental health services
- Needs of persons experiencing homelessness

### **Screening, Care, and Management of Individual Health**

- Childhood asthma (leading cause of absenteeism among students)
- Cancers
- Hypertension
- Heart disease

- Diabetes
- Obesity
- Infectious diseases such as tuberculosis
- Mental health
- Substance abuse
- Arthritis
- Flu shots and vaccinations (including boosters for COVID-19)
- Physical activity in seniors

## Section 13: Health Care Facilities and Other Resources

This section includes:

---

- Summary and listing of health care facilities and other resources located in the USC Arcadia Hospital Service Area

## **Health Care Facilities and Other Resources**

In the ZIP codes comprising the hospital service area, there are 16 open hospitals (ten general acute care hospitals and two acute psychiatric hospitals) and 32 licensed free and community clinics. See page 3 of this section for **Summary of Health Care Facilities, by ZIP Code**.

There are 15 senior/community centers serving various cities and communities in the hospital service area. See page 5 of this section for **Summary of Senior Centers, by ZIP Code**.

**Summary of Health Care Facilities (Hospitals and Community and Free Clinics), by ZIP Code**

**Notes:**

Data is updated as of June 30, 2022

EMS = Emergency Medical Services available at hospital facility; designation may be basic or comprehensive (noted as COMP)

Beds = Total number of beds

A **free clinic** is defined as a clinic operated by a tax-exempt, nonprofit corporation supported in whole or in part by voluntary donations, bequests, gifts, grants, government funds or contributions, that may in the form of money, goods, or services. Patients are not charged for services rendered or for drugs, medicines, appliances, or apparatuses furnished.

A **community clinic** is defined as a clinic operated by a tax-exempt corporation that is supported and maintained in whole or in part by donations, bequests, gifts, grants, government funds or contributions, that may be in the form of money, goods, or services. Any charges to the patient shall be based on the patient's ability to pay, utilizing a sliding fee scale.
