

Maternal Child Health Services at USC Arcadia Hospital

Having a baby is an exciting time for the expectant mother and family, we are honored to be part of this special time in our patients' lives. Our beautiful, private and semi-private suites are designed to facilitate a quick recovery so you and your baby can be comfortable as you share the important first moments together. In 2023, we welcomed **1,100+** newborns.

Maternity care at USC Arcadia Hospital is prepared to handle our patients' needs, this includes any emergencies should they arise. Our maternity care center houses nine labor/delivery/recovery suites, four labor rooms and two operating rooms. Our state-of-the-art facility is outfitted with 24-hour anesthesia coverage, registered nurses, OB technicians, physicians who are on-call 24/7, as well as a multidisciplinary team.

The Need: 15 Panda Infant Warmers

Goal: **\$525,000 / \$35,000 per unit**
Funding still needed: **\$220,000 (6 units)**

Maternal Child Health needs to replace their newborn warmers with new Panda Infant Warmers. The Panda Warmer has simple and easy-to-use features such as hands-free alarm silence, full-color display, and an integrated scale, which help caregivers focus on the most critical aspects of their job—caring for newborns and their families.

The compact size of the Panda Warmers allow more room for health care providers, and the family to interact with the infant patient. They have a heated surface that makes for a simple and comfortable experience for providers, parents, and the little patient. It has dimmable observation lights and an integrated procedure light offering the best light needed for patient care. Panda Warmers have an integrated X-ray cassette tray, plus, they provide uninterrupted thermal support during X-rays. A built-in scale makes taking baby's weight easy, eliminating the need to move baby to another scale. They have fully integrated, life-saving tools to support the latest resuscitation recommendations with integrated SpO2, and ResusView ECG heart rate options with minimal setup for high-risk deliveries.

Your generous support will have a positive impact on the care of our youngest patients. To learn how you can help, please contact:
